Animal.h Copy-paste code

```
#include <iostream>
#ifndef ANIMAL_H

class Animal {
public:
    std::string name, species;

    void display() { // Overridden in ZooAnimal.cpp
        std::cout << "Name:\t" << name << std::endl;
        std::cout << "Species:\t" << species << std::endl;
    }
};

class Habitat {
public:
    std::string type;
    double size;

    void display() { // Overridden in ZooAnimal.cpp
        std::cout << "Type:\t" << type << std::endl;
        std::cout << "Size:\t" << size << std::endl;
    }
};

#endif
```

ZooAnimal.cpp Copy-paste code

```
#include "Animal.h"

// Inherits from Animal and Habitat classes
class ZooAnimal : public Animal, public Habitat {
public:
    int id;
    std::string diet;

    void display() {
        std::cout << "Name: " << name << std::endl;
        std::cout << "Species: " << species << std::endl;
        std::cout << "Habitat: " << type << std::endl;
        std::cout << "Size: " << size << std::endl;
        std::cout << "ID: " << id << std::endl;
        std::cout << "Diet: " << diet << std::endl;
    }
};

int main() {
    ZooAnimal a1;
    a1.name = "Bob";
    a1.species = "Giraffe";
    a1.type = "Savannah";
    a1.size = 1000;
    a1.id = 1;
```

```
    a1.diet = "Herbivore";

    a1.display();
    std::cout << std::endl;

    ZooAnimal a2;
    a2.name = "Clifford";
    a2.species = "Big Red Dog";
    a2.type = "House";
    a2.size = 125;
    a2.id = 2;
    a2.diet = "Omnivore";

    a2.display();

    return 0;
}
```

Screenshots:

```cpp
#include <iostream>
#ifndef ANIMAL_H

class Animal {
public:
    std::string name, species;

    void display() { // Overridden in ZooAnimal.cpp
        std::cout << "Name:\t" << name << std::endl;
        std::cout << "Species:\t" << species << std::endl;
    }
};

class Habitat {
public:
    std::string type;
    double size;

    void display() { // Overridden in ZooAnimal.cpp
        std::cout << "Type:\t" << type << std::endl;
        std::cout << "Size:\t" << size << std::endl;
    }
};

#endif  #ifndef ANIMAL_H
```

```cpp
#include "Animal.h"

// Inherits from Animal and Habitat classes
class ZooAnimal : public Animal, public Habitat {
public:
    int id;
    std::string diet;

    void display() {
        std::cout << "Name: " << name << std::endl;
        std::cout << "Species: " << species << std::endl;
        std::cout << "Habitat: " << type << std::endl;
        std::cout << "Size: " << size << std::endl;
        std::cout << "ID: " << id << std::endl;
        std::cout << "Diet: " << diet << std::endl;
    }
};
```

```cpp
int main() {
    ZooAnimal a1;
    a1.name = "Bob";
    a1.species = "Giraffe";
    a1.type = "Savannah";
    a1.size = 1000;
    a1.id = 1;
    a1.diet = "Herbivore";

    a1.display();
    std::cout << std::endl;

    ZooAnimal a2;
    a2.name = "Clifford";
    a2.species = "Big Red Dog";
    a2.type = "House";
    a2.size = 125;
    a2.id = 2;
    a2.diet = "Omnivore";

    a2.display();

    return 0;
}
```

Output:

```
Name: Bob
Species: Giraffe
Habitat: Savannah
Size: 1000
ID: 1
Diet: Herbivore

Name: Clifford
Species: Big Red Dog
Habitat: House
Size: 125
ID: 2
Diet: Omnivore

Process finished with exit code 0
```
