

Main GUI

Conversions Window

Conversion Calculator

Convert from one unit to another!

Volume

Currency

Temperature

Time

The image shows a window titled "Conversion Calculator" with a standard Windows-style title bar (minimize, maximize, close buttons). The main content area has a light gray background. At the top, it says "Convert from one unit to another!". Below this, there are four blue rectangular buttons with white text, arranged in a 2x2 grid. The buttons are labeled "Volume", "Currency", "Temperature", and "Time".

Circle Window

Circle

Enter radius.

in

Calculate

Area:

in²

The image shows a window titled "Circle" with a standard Windows-style title bar. The main content area has a light gray background. It starts with the text "Enter radius." followed by a text input field and the unit "in". Below this is a blue button with white text labeled "Calculate". Underneath the button is the text "Area:" followed by another text input field and the unit "in²".

Trigger for Circle Window

```
JButton btn_CircleButton = new JButton("Circle");
btn_CircleButton.addActionListener(new ActionListener() {

    /** Links the action of pressing the "Circle" button
     * to the opening of the corresponding window,
     * which calculates the area of the circle
     * with the input provided.
     */
    public void actionPerformed(ActionEvent e) {
        CircleWindow circWindow = new CircleWindow();
        circWindow.setVisible(true);
    }
});
```

Sample Output

A screenshot of a Java Swing window titled "Circle". The window has a light gray background and a title bar with standard Windows controls. Inside the window, there is a label "Enter radius." followed by a text input field containing the number "12" and a unit label "in". Below the input field is a blue "Calculate" button. Underneath the button, the text "Area:" is displayed, followed by another text input field containing the value "452.389342116" and a unit label "in^2".

Triangle Window

A screenshot of a Java Swing window titled "Triangle". The window has a light gray background and a title bar with standard Windows controls. Inside the window, there are two labels: "Enter a" and "Enter b", each followed by a text input field and a unit label "in". To the right of these input fields is a blue "Calculate" button. Below the input fields, the text "Area:" is displayed, followed by a text input field and a unit label "in^2".

Sample Output

Triangle

Enter a
12 in

Enter b
12 in

Calculate

Area:
72.0 in²

Trigger for Triangle Window

```
JButton btn_TriangleButton = new JButton("Triangle");  
btn_TriangleButton.addActionListener(new ActionListener() {  
  
    /** Links the action of pressing the "Triangle" button  
     * to the opening of the corresponding window,  
     * which calculates the area of the triangle  
     * with the input provided.  
     */  
    public void actionPerformed(ActionEvent e) {  
        TriangleWindow triWindow = new TriangleWindow();  
        triWindow.setVisible(true);  
    }  
})
```

Square Window

Square

Enter side length.

in

Calculate

Area:
in²

Trigger for Square Window

```
JButton btn_SquareButton = new JButton("Square");
btn_SquareButton.addActionListener(new ActionListener() {
    /** Links the action of pressing the "Square" button
     * to the opening of the corresponding window,
     * which calculates the area of the square
     * with the input provided.
     */
    public void actionPerformed(ActionEvent e) {
        SquareWindow sqWindow = new SquareWindow();
        sqWindow.setVisible(true);
    }
})
```

Sample Output

A screenshot of a Java Swing window titled "Square". The window has a standard title bar with minimize, maximize, and close buttons. Inside the window, there is a label "Enter side length." followed by a text input field containing the value "12" and a unit label "in". Below the input field is a blue "Calculate" button. Underneath the button, there is a label "Area:" followed by another text input field containing the value "144.0" and a unit label "in^2".

Cube Window

A screenshot of a Java Swing window titled "Cube". The window has a standard title bar with minimize, maximize, and close buttons. Inside the window, there is a label "Enter a" followed by a text input field and a unit label "in". Below the input field is a blue "Calculate" button. Underneath the button, there is a label "Area:" followed by another text input field and a unit label "in^3".

Trigger for Cube Window

```
JButton btn_Cube = new JButton("Cube");
btn_Cube.addActionListener(new ActionListener() {
    public void actionPerformed(ActionEvent e) {
        CubeWindow cubeWindow = new CubeWindow();
        cubeWindow.setVisible(true);
    }
});
```

Sample Output

The screenshot shows a window titled "Cube" with a standard Mac OS title bar. Inside the window, there is a label "Enter a" followed by a text input field containing the number "12". To the right of the input field is the unit "in". Below the input field is a blue button labeled "Calculate". Underneath the button, the text "Area:" is displayed. Below "Area:" is another text input field containing the value "864.0", followed by the unit "in^3".

Rectangular Prism Window

The screenshot shows a window titled "Prism" with a standard Mac OS title bar. Inside the window, there are two input fields. The first is labeled "Enter radius" and is empty, followed by the unit "in". The second is labeled "Enter height" and is also empty, followed by the unit "in". To the right of these inputs is a blue button labeled "Calculate". Below the inputs, the text "Area:" is displayed, followed by an empty text input field and the unit "in^2".

Trigger for Prism Window

```
JButton btn_RectPrismButton = new JButton("Rectangular Prism");
btn_RectPrismButton.addActionListener(new ActionListener() {
    public void actionPerformed(ActionEvent e) {
        PrismWindow prismWindow = new PrismWindow();
        prismWindow.setVisible(true);
    }
});
```

Sample Output

A screenshot of a Prism application window. The window has a title bar with the Prism logo and standard minimize, maximize, and close buttons. The main content area has a light gray background. It contains two input fields: 'Enter radius' with the value '10' and 'Enter height' with the value '4'. Both fields are followed by the unit 'in'. To the right of these fields is a blue 'Calculate' button. Below the inputs, the text 'Area:' is displayed. Underneath, a text box shows the result '652.188349886' followed by the unit 'in^2'.

Cylinder Window

A screenshot of a 'Cylinder' application window. The title bar shows the word 'Cylinder' and standard window controls. The interface is identical to the Prism application, with 'Enter radius' and 'Enter height' fields, a 'Calculate' button, and an 'Area:' label. However, the input fields are currently empty, and the area result field is also empty, showing only the unit 'in^3'.

Trigger for Cylinder Window

```
btn_CylinderButton.addActionListener(new ActionListener() {  
    public void actionPerformed(ActionEvent e) {  
        CylinderWindow cylinderWindow = new CylinderWindow();  
        cylinderWindow.setVisible(true);  
    }  
});
```

Sample Output

Cylinder

Enter radius
12 in

Enter height
10 in

Calculate

Area:

1657.92 in³
